WASTE LUBRICATING OILS

Recycling and the Circular Economy

- The majority of the waste oil in the U.K is still burned as a heavily polluting fuel. We are working hard to put a stop to that and ensure that as much is put back to good use as possible.
- On the 1st October 2020, the law changed - Waste Oils should be recycled by re-refining them to produce a lubricating base oil that can be used to manufacture new lubricants.
- What happens to the waste oil that you produce?
Have you checked to see where it is consigned to?
- ALL of the waste oils that we collect are re-refined producing clean, clear and bright distillates for sale back into the lubricants market.
